EXPERIENCE

Company: Deloitte
Client: Deloitte Global (Feb 23 – till date)
Description:
Deloitte Global provides audit, consulting, financial advisory, risk advisory, tax, and legal

serviceswith employees globally, and operates in over 150 countries.

Roles and Responsibilities:
- As a Aem frontend developer, I'm responsible for creation of mobile responsive and visually appealing pages using HTML, CSS, JavaScript, and Bootstrap.
- Utilize React JS to build modular and reusable components, enhancing both functionality and user experience across projects.
- Work within Agile methodologies, participating in sprints and scrum ceremonies to deliver timely and iterative solutions that meet business objectives.
- Demonstrate expertise in writing clean, maintainable code, promoting best practices and ensuring high code quality.
- Review and provide constructive feedback on peer-written code to maintain coding standards and improve team efficiency.
- Developed a custom QA application using Node.js and Puppeteer, automating testing processes to enhance QA efficiency and accuracy.
- Create numerous custom HTML and CSS fragments in Adobe Experience Manager (AEM), ensuring flexibility and consistency in content development.
- Frequent grooming & collaborations with stakeholders to understand development andbusiness enhancement needs.

Company: Cognizant

Client: AstraZeneca (June 22 – Jan 23)

Description:
AstraZeneca is a Pharmaceutical and Research Company, for which I am committed to developingwebsites for their products and launching activities. Handles technical and functional issues in the org through Agile methodology.

Roles and Responsibilities:
- Front-end developer, utilized HTML, CSS, JavaScript, Bootstrap, and Tailwind CSS to craft responsive and visually engaging web pages in Adobe Experience Manager.
- Operated within Agile frameworks, actively engaging in sprint ceremonies like planning, stand-ups, and retrospectives to deliver iterative solutions aligned with project objectives.
- Collaborated closely with client clients to decipher requirements and translate them into actionable technical solutions, contributing to the enhancement of digital experiences and functionalities.
- Configured standard components using AEM as per business requirement.
- Delivered multiple web projects punctually and within time constraints, earning recognition for adherence to rigorous quality standards and exceeding client expectations.
- Creating new web pages/sites using AEM with clean and reusable code.
- Made sure to test the functionalities of developed pages in all scenarios.
- Deployment/launching of sites to production using AEM by taking proper pre and postdeployment steps.

APPRECIATIONS
- Received Agile MVP award for 2 times in a row.
- Appreciation mail from project.
- Received on spot awards for delivering multiple custom pages within deadline.

I hereby affirm that all the information furnished above is true to the best of my knowledge and belief and I bear responsibility for the correctness of the above-mentioned particulars.
